

Getting ahead of HLB: from reactive control to risk-guided surveillance

Huanglongbing affects more than 250,000 family producers and 1.5 million hectares across Latin America. Four countries are testing another way to confront it: detect sooner, decide with models, and plant tolerant material.

-  **-50 %**
Expected reduction in monitoring cost
-  **3**
Expected harmonized and validated protocols
-  **10**
Expected genotypes evaluated and validated
-  **-30 %**
Reduction in disease progression in pilot areas
