

Network for socio-ecological resilience to climatic adversities

Knowledge exchange platform on the subject of socio-ecological resilience to climatic adversities in Family Farming systems

Argentina/Colombia/Costa Rica
/Ecuador/Panamá/Dominican Republic
/República Dominicana/Panamá

Regional Platform Initiative

A platform was set up with the aim of developing a consensus proposal called: "Innovations to increase socio-ecological resilience in the face of climatic adversities in mixed systems of family farming, through their

sustainable intensification" through a regional workshop held on 4th, 5th and 6th of December, 2017 in San Carlos de Bariloche, Río Negro province, Argentina.

Regional Platform Tech solution

A proposal for international technical cooperation was prepared to evaluate the impact of innovations on the sustainable intensification of family

farming using a participatory interdisciplinary approach with the co-construction of knowledge and participatory methodological tools.
