

Traditional seeds

Increased competitiveness of family farming

625
Beneficiary families

116
Trained farmers

Main Donors

Traditional seed supply centers

Initiative

The main results of the project were: i) characterization of the seed system in the study territories, ii) an integrated model of production / supply of TV seed, iii) variety supply centers, iv) a network of member farmers of each Center, v) new varieties and locally

adapted crops with associated valuable information, v) an access system and instruments for linking and exchanging germplasm that make the system sustainable, vi) research-development methodologies.

Produce quality products and contribute to sustainable local development

Tech solution

The project proposes to intervene in the initial stage of the chain by increasing the supply and quality of TV seeds. For this, the creation of an integrated system of production /

varietal supply of horticultural species is proposed that allows better management of traditional seeds, to thus strengthen the competitiveness of FA in participating countries.

MORE INFO

Impacts and Results

Increase the varietal offer of traditional seeds through the link with the germplasm bank of the INIAs.
Characterize the traditional seed

system of the study territories. Develop an access system and instruments for linking and exchanging germplasm that make the system sustainable.
