

Online crop management support platform

CHILE, ARGENTINA, HONDURAS, URUGUAY

i Webstory

Technological solution

Create an open-access online crop management support platform with information to support farmers and advisors in their decision-making.

Technological description

This proposal aims to create an online support platform for crop management, freely accessible with information to assist farmers and advisors in decision-making. The main objective of this proposal is to increase productivity and sustainability of productive systems through a free online platform supporting agronomic management decision-making for the main crops of the southern cone in the context of climate change.
